Title: Injurious Wildlife; Making Injurious Wildlife Determinations Under the Lacey Act

Abstract: The injurious wildlife provisions of the Lacey Act help us prevent and manage introductions of invasive species. We add species to the list of injurious wildlife to prevent their introduction into or establishment within the United States. Species listed as injurious (including their gametes and viable eggs) must not be imported into the United States or transported between the continental United States, the District of Columbia, Hawaii, the Commonwealth of Puerto Rico, or any territory or possession of the United States by any means without a permit issued by the Service. We propose to revise our regulations for listing species as injurious in order to enhance the species evaluation process and enable more efficient and effective decisions that will help prevent the introduction and spread of injurious wildlife. As under current authorization, only nondomesticated species will continue to be evaluated for listing.
